eReam

For all industrial robots with inner cable dress.

This brochure contains information about the SKS Weld Package, the torch system **Power Joint Lite**, as well as consumables and spare parts. There are various features of the welding machine components and torch systems available depending on the robot system and the welding task.

The **Power Joint Lite Weld Package** can be used with common industrial robots such as **ABB, FANUC, KUKA** and **YASKAWA/MOTOMAN**.

The complete SKS Power Joint Lite Weld Package is designed for the following welding processes, materials and power range:

Processes: MIG/MAG (GMAW), Pulse, MIG Brazing

Wire materials: High-alloy steels, low-alloy steels, aluminum and copper alloys, nickel-based materials

Wire diameter: 0.8-1.6 mm

Max. power: 420 A - 60 % duty cycle/40 °C, air-cooled

1 Power source

Power source LSQ5

ALTERNATIVE

Power source LSQ3

OPTION

Accessories: Wall mount for LSQ5

Space-saving design that makes for easy cleaning/maintenance.

LSQ5 power source with Direct Control Technology DCT

The LSQ5 ensures the optimum arc energy. It uniquely adjusts to different weld processes. Unlike conventional power sources with inverter technology, the LSQ5 with Direct Control Technology controls its switching transistors without any fixed clock frequency according to the needs of the weld process. Without any delay, the energy needed for the process is provided instantly. The flexible fine tuning is done by a central processor. The CPU continuously analyzes the weld process and current/voltage values on the basis of data obtained and optimally drives the switching transistors of the power section. This results in an extremely high efficiency and a low temperature development.

The power source can be configured with only two buttons and four LED indicators. For world-wide usage, voltages can be configured without opening the power source.

LSQ3 power source with Direct Control Technology (DCT)

The LSQ3 offers enough power reserves for special weld tasks like chassis and exhaust parts and other thin sheet metal applications.

LSQ3: 340 A at 60 % duty cycle, 3 x 400 V

LSQ3A: 340 A at 60 % duty cycle, 3 x 480 V

Overview of power sources

DESCRIPTION	PART-NO.
LSQ5	77-1185-00
LSQ3	77-1184-00
LSQ3A	77-1184-10
LSQ5-CCC	77-1185-60
LSQ3-CCC	77-1184-40

The main benefits are:

- DCT provides a speed regulation up to ten times higher compared to conventional inverter technology. This leads to excellent control behavior and shorter response times.
- The weld properties are substantially improved. Software replaces hardware: Fewer components also increase the reliability in continuous operation.

Specifications:

DESCRIPTION	LSQ5(-CCC)	LSQ3(-CCC)	LSQ3A
Performance	420 A - 60% duty cycle/40 °C (400 A)	340 A - 60% duty cycle/40 °C	340 A - 60% duty cycle/40 °C
Processes	MIG/MAG (GMWA), Pulse, MIG Brazing		
Weight	49 kg	37 kg	37 kg

2 Weld process controller

Innovative Control Concepts with Touch Screen.

With the new Q84r and the compact Q84s up to four weld machines can be controlled centrally.

The new Q84r and Q84s are equipped with a touch screen, an innovative usability concept and an advanced visualization technology for much easier operating. The user interfaces have the look and feel of the Q8Tool4 software. Individual weld process controllers are in card slots in the Q84r/s. This new weld process controller concept can host up to four weld process controller cards. Each card independently controls a weld machine. As an alternative to the Q84r/s weld process controllers, the Q80 has been developed to control a single weld machine.

Controlling up to four weld machines at the same time

2 Weld process controller

Weld process controller Q84r

Weld process controller Q84s

Please note:

The Q84r/s can be equipped with up to four weld process controller cards.

Weld process controller Q84r/s

The universal weld process controllers Q84r and Q84s calculate the optimal parameters for each welding process. Only basic data such as material, wire type, wire feed speed and type of gas must be entered. The Q84r is equipped with a 10" touch screen, the space-saving Q84s with a 7" touch screen. For wall mounting the display of the Q84s can be rotated by an angle of 180°.

- Processes/features: MIG/MAG (GMAW), I-Pulse, U-Pulse, KF-Pulse, Synchroweld, RWDE, NWDE
- Programs: 992 (x4)
- General functions: Display and saving of readings, alarms
- Monitoring functions: Weld current monitoring, auto compensation, arc and ignition monitoring, motor current, gas and water monitoring
- Easy to network via Ethernet: Traceability
- Ports: RJ45-Ethernet, SPW-Bus, SD card slot
- Remote Control/Administration: Q8Tool, VNC client

Overview weld process controller

DESCRIPTION	PART-NO. (Q84s)	PART-NO. (Q84r)

2a Software/IT

Q8Tool software

The Q8Tool software provides accurate and comprehensive process monitoring. The user can store weld parameters for documentation on a PC and/or administrate them. It offers basic functions such as reading, modifying and documenting of weld parameters. Additionally, new weld parameters can be created and transferred to the universal weld process controllers. The weld data is portable and the installation of further control units on new equipment is easy. Also, the software allows reading and exporting of measurements and alarms. Graphical and numerical recording of measures helps defining and optimizing parameters for new parts. Users have a powerful tool for analyzing and documenting their weld results.

Network

The weld process controller units can easily be networked via Ethernet ports: Time savings through centralized administration of all controllers within the corporate network. There is a central backup of all welding parameters, management of user rights and access, process monitoring up to traceability. The Q8Tool software is provided free of charge with the weld process controller. No additional hardware or software is required.

3 Robot interface

Perfect integration.

Interfacing all industrial robot types.

With the universal interface solution, weld process controllers can be connected with all industrial robot types. Users basically have two options for connecting robots with weld process controllers: The connection can be realized with the interface UNI 5 or by integrating into a given field bus environment with a field bus solution.

Standard application

Robot controllers or overall system controllers (e.g. PLC) use digital or analog signals to communicate with the weld process controller. The interface UNI 5 translates these signals for the welding machine. With just one interface, a variety of digital encodings and analog levels can be processed. The interface UNI 5 comes with a preconfigured connection kit for easy installation.

Field bus application

Field bus systems exchange signals via serial communication. The field bus master, usually the robot controller or overall system controller, bundles and processes the signals of the connected field bus, including the welding machine. Standard field bus systems are e.g., Interbus-S, Profibus DP or DeviceNet. The field bus interface FB5 translates the field bus signals for the welding machine using a standardized protocol. It makes no difference which type of field bus system is used. The signals are always at the same place on the field bus. This makes the preparation of the robot or system controller much easier.

3 Robot interface

Robot interface UNI 5

The interface connects the welding equipment with all industrial robot types. With its high degree of standardization, the UNI 5 is the perfect choice for connecting the weld process controller (e.g. Q80) with an industrial robot. The UNI 5 comes preprogrammed and configured for different robot types. Configuration to a particular robot type is handled easily by programming the interface with two buttons for the given robot type.

Overview of robot interfaces

DESCRIPTION	PART-NO.
For robot type-ABB

DESCRIPTION	PART-NO.
Connection cable 2.0 m (with open end)	77-1182-04

OPTION

SYNCHROWELD

Synchroweld unites the weld system and robot by a communication protocol (RWDE). This technology allows the weld system to get the actual robot speed and automatically adjusts the weld parameters accordingly. The result is a constant energy per unit length. At the same time, the programming effort can be significantly reduced.

Please note:

Further information on Synchroweld with ABB, Fanuc, KUKA, Yaskawa/Motoman can be found in our Synchroweld brochure.

4 Wire feeder

Strong, lightweight and precise.

The PF5 wire feeder.

Smaller and with less weight accompanied by improved efficiency over conventional wire feeders the PF5 goes along with the steady development of arc welding robots.

ALTERNATIVE

PF5 with integrated gas flow sensor

Power Feeder PF5

Modern motor, gear and control technology provide a strong performance and highest possible precision. The robust plastic housing is electrically insulated. As a "lightweight" the PF5 is the perfect choice for the new generation of robots with inner cable dress. The industrial proven Power Feeder PF5 is available with an additional monitoring functionality: an integrated gas-flow sensor. The weld process controller displays the gas flow values, and can also be triggered to an alarm, in case of a non-defined gas flow rate.

Overview PF5

DESCRIPTION	PART-NO.
PF5 LEA	10-2-9
PF5 LEA with integrated gas flow sensor	10-2-109

Technical data

Weight	3.8 kg
Motor	70W
Wire feeding speed	2.5 - 25 m/min
Roll diameter	0.8 - 1.6 mm

Shielding Gas Saver

The benefit of the shielding gas saver is its pre-regulated working pressure of 1.2 bar (common 4.5 bar). Therefore the ram pressure is reduced, i.e. there are key benefits of the shielding gas saver at ignition of the welding torch and an improved gas saving. The shielding gas saver ensures a constant gas flow during the welding task.

Shielding Gas Saver

DESCRIPTION	PART-NO.
Shielding Gas Saver	93-62-1

4 Wire feeder

Center guides

Available in two versions: For steel or aluminum wires

5 Wire guidance polymer for aluminum wires

1

2

3

2

4

- 1 Wire inlet body with quick coupling
- 2 Connection nipple for polymer conduit
- 3 Polymer conduit
- 4 Drum connector with ceramic inlay

Please note:

Further information can be found in our brochure "Wire guidance" (DOC-0193EN).

With the new SKS polymer guidance, the high efficiency of the whole system extends up to the drum.

Advantages of polymer wire guidance

- Extraordinary good glide properties reduces motor load
- Minimized abrasive wear and reduced dirt in wire feeder and torch system
- Lightweight design and a high inherent stability for easy installation
- Length can be freely chosen by the customer
- Cost optimized exchange: only the polymer conduit must be changed, connectors are reusable.
- Optimized materials for longer life and reduced downtimes

Wire inlet body, Connection nipple, Polymer conduit and Connection for wire drum

5 Wire guidance ERC for steel and stainless steel wire materials

- 1 Wire inlet body with quick coupling
- 2 Connection nipple for ERC conduit
- 3 Polymer wire conduit ERC
- 4 Connection for wire drum with inner ceramic inlay

With the ERC wire guidance for steel/stainless steel, the high efficiency of the whole system extends up to the drum.

Advantages

- Very good inherent stability due to thick polyethylene insulating jacket
- Good sliding properties
- Reduced wear by using flat wire for monocoil core
- Suitable for steel and stainless steel wires

Wire guidance ERC

DESCRIPTION	TEILE-NR.

WIRE FEEDER

9 Torch system Power Joint Lite

The new freedom of motion.

Power Joint Lite for hollow wrist robots with inner torch cable.

The Power Joint Lite torch system perfects the interaction of welding machines and robots with inner cable dress. A single rotary joint, endlessly rotatable, transmits electrical energy and all media such as gas, air and wire. This reduces torch cable movement (no twisting/no torsional strain) and therefore increases the lifetime of the torch cable. The lack of reorientations also saves airtime because the torch reaches every position in the shortest possible path. The Power Joint Lite uses the thousand times proven Power Joint technology and was developed for supporting the internal robot collision detection. The fixed/rigid torch neck allows the precise adjustment of the robot parameters – an integrated rubber buffer protects the torch and the robot system, up to a complete stop/switch-off of all axes.

The complete SKS Power Joint Lite Weld Package is designed for the following welding processes, materials and power range:

Processes: MIG/MAG (GMAW), Pulse, MIG Brazing

Wire materials: High-alloy steels, low-alloy steels, aluminum and copper alloys,
nickel-based materials

Wire diameter: 0.8-1.6 mm

Max. power: 420 A - 60 % duty cycle/40 °C, air-cooled

9 Torch system Power Joint Lite: Parts overview

Power Joint Lite torch system parts overview

Liner for torch cable

For the following diameters and filler materials:

Quick load liner:

Steel, bronze (wire- ϕ 0.8 - 1.0 mm)

LENGTH	PART-NO.
1.8 m	415-35-6Q
3.0 m	415-35-10Q

Quick load liner:

Steel, bronze (wire- ϕ 1.2 - 1.6 mm)

1.8 m	415-116-6Q
3,0 m	415-116-10Q

Aluminum (wire- ϕ 1.2 - 1.6 mm)

per meter	91-68-47025-25E
Sleeve	44-30-7
Power Pin cap	61-2-0-2-7

Sleeve for quick load liner

Fixates the liner in the torch cable

Sleeve for quick load liner

DESCRIPTION	PART-NO.
Sleeve for quick load liner	415-26

10 Torches: Torch necks/Accessories

Torch necks for Power Joint Lite

With the innovative bayonet lock system, the SKS torch neck can be replaced quickly. This unique tool-free quick change system is also highly precise with TCP accuracy of ± 0.2 mm.

For aluminum applications SKS recommends a Frontpull torch system

INFO: TORCH NECK

SKS offers a special torch neck (up to 250 A, ZK-HeavyDuty up to max. 300 A) for welding components with tight accessibility. The special torch neck needs a smaller insulator (ZK) and a more compact gas nozzle (ZK). Standard Power Lock contact tips can be used.

TCP drawings can be found on the next to last page (torch necks).

Clamping cap for SKS single wire torch necks

Tool-free assembly with bayonet quick-change system

DESCRIPTION	PART-NO.
Clamping cap	71-3-25

Insulator for SKS torch necks

DESCRIPTION	PART-NO.
Standard	58-1-5
ZK type	43-6-4-2
ZK heavy duty type	43-6-4-3

Power Lock: Retaining heads

Retaining heads for heavy duty applications with thread for threaded gas nozzles for simple and safe installation

Overview of retaining heads

DESCRIPTION	PART-NO.
Standard	43-9-2
ZK-type	43-8-6

Power Lock: Contact tips

- Tapered design for high TCP reproducibility
- Improved heat transfer extends lifetime
- Improved power transition: constant arc quality
